

CONNECTION

CONNECTION EXAMPLE

OPERATION

When a card is inserted, the power supply of the room is activated. As soon as the guest leaves the room and removes the card, all electrical appliances that were on are deactivated. As a result, energy is saved.

In the HES-125 model the valid cards will be those with a working frequency of 125KHz, while in the HES-1356 model the valid cards will be those with a frequency of 13.56MHz.
